DETAILED ACTION

Location of Application

1. The Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1655.

Election/Restriction

2. Applicant's election of Group I, claims 1-17 in Paper No. 9 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

3. Upon review of the prior restriction requirement, new added claims 27-35, and applicants remarks, a new restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 27, and 28, drawn to a method of isolating a region of genomic DNA associated with a phenotype of interest, classified in class 436, subclass 94.
- II. Claims 4-7, 29, and 30, drawn to a method of isolating a region of genomic DNA associated with a phenotypic trait of interest, classified in class 436, subclass 94.
- III. Claims 10-12, 15, and 16, drawn to a method of isolating a region of genomic DNA associated with a phenotypic trait of interest, classified in class 435, subclass 94.

Art Unit: 1655

IV. Claims 23-25, drawn to a method of isolating a region of genomic DNA associated with a phenotypic trait, classified in class 436, subclass 94.

4. The inventions are distinct, each from the other because of the following reasons:

Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to different methods that have different modes of operation, different functions, or different effects.

Groups I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to different methods that have different modes of operation, different functions, or different effects.

Groups I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to different methods that have different modes of operation, different functions, or different effects.

Groups II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the

Art Unit: 1655

inventions are directed to different methods that have different modes of operation, different functions, or different effects.

Groups II and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to different methods that have different modes of operation, different functions, or different effects.

Groups III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to different methods that have different modes of operation, different functions, or different effects.

5. Because these inventions are distinct for the reasons given above and the search required for Group I such as steps (B) to (D) in claim 1 is not required for Groups II, III, and IV, the search required for Groups II, III, and IV such as mapping population of *Arabidopsis* plants at an average density of more than one polymorphism per about 100 kb is not required for Group I, the search required for Groups II and III such as step (B) of claims 4 and 10 is not required for Group IV, the search required for Group III such step (C) in claim 10 is not required for Groups II and IV, restriction for examination purposes as indicated is proper.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

Art Unit: 1655

named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

7. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993)(See 37 CFR § 1.6(d)). The CM Fax Center number is either (703) 308-4242 or (703)305-3014.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank Lu, Ph.D., whose telephone number is (703) 305-1270. The examiner can normally be reached on Monday-Friday from 9 A.M. to 5 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, W. Gary Jones, can be reached on (703) 308-1152.

Any inquiry of a general nature or relating to the status of this application should be directed to the Chemical Matrix receptionist whose telephone number is (703) 308-0196.
